

Claymark® Centurion™

TRU-CORE®

Protected Wood Product

- **TRU-CORE®** protected **Centurion™** boards are highly resistant to rot, decay, and termite damage when used as recommended in the United States.
- These boards are backed by **Claymark's 50-year** written limited warranty against rot, decay, and termite damage. The Centurion™ warranted protection is based upon a proven, durable, responsible, and environmentally sound protection system.
- Cut surfaces, ends, and drilled holes in the board do not require re-treatment at the jobsite. Unlike conventional "Treatment" methods, the unique **TRU-CORE®** Process penetrates the entire board thereby making field treatment unnecessary.
- The Protection System is user friendly and does not include volatile organic solvents, heavy metals, arsenic, chromium, or similar materials.
- The Protection System incorporates seven key ingredients to achieve the most durable and comprehensive wood protection available.
- The Protection System components have been used for over 50 years with an excellent performance history on Siding, Fascia Board, Trim, Windows, Doors, Framing, etc.
- The Protection System components are recognized in many standards including those of the US, Hawaii, Canada, UK, New Zealand, and Australia.
- **Claymark** applies the Protection System only to the finished board using fully enclosed, 100% recaptured materials. No residues or unusable materials are created.
- **Claymark's** application to the finished board eliminates the risk of removing valuable protection through post-treatment shaping, planing, sanding or molding associated with conventional treatments.
- **Claymark's** application to the finished board is carefully monitored by in-process in-line physical checks as well as by patented Quality Scanning technology.
- **Claymark's** quality protection program includes Independent Auditor verification of full preservative penetration.
- **Claymark** uses only the very highest quality factory coating to ensure protection against jobsite weathering for up to 60 days until final exterior finishes can be applied.
- Like all valuable wood products **Centurion™** should be stored, installed, handled, and maintained correctly for the best performance.

The Protection System components are recognized by the Window and Door Manufacturers Association (WDMA) and the American Wood Preservers Association (AWPA). Active ingredients and formulations are registered with the U.S. Environmental Protection Agency (EPA).

This Wood Product is fully protected throughout the Wood Structure.

Centurion™, Claymark®, and TRU-CORE® are protected trademarks.

The materials and process used to protect the wood and the protected wood are covered by six patents as well as other patents pending in the US, Canada, Chile, New Zealand, Australia and other countries worldwide.

See the **Centurion™** Written Limited Warranty for details.

See the **Centurion™** Product Information Sheet for storage, handling, installation and maintenance recommendations.

See the **Centurion™** Handling Guide attached to the Board Bundles for handling instructions.

TRU-CORE® is a Trademark and Technology of Kop-Coat, Inc.
