Treated to Preserve and Extend the Life of the Wood.

Claymark Centurion is the next generation in environmentally responsible finger-jointed pine. Precision manufactured from premium New Zealand radiata pine, it provides a perfect finish from every single board thanks to Claymark's uncompromising dedication to quality. If the end product is anything less than perfect, it never even makes it out of our factory. Centurion is the first choice for any job that requires a superior, appearance grade finish. But it has more than good looks in its favour. It is an environmentally sound product, sustainably grown and manufactured in New Zealand to exacting eco-standards, which is why it is certified by the

Forest Stewardship Council.

A next-generation boron treatment called Tru-Core is used to preserve and extend the life of the wood. This eco-friendly treatment penetrates right to the core and has a proven history of performance. To protect its surface, Centurion is coated in a new-generation, protective primer.

This gives state-of-the-art protection, prevents tannin and resin bleed, and provides better adhesion and flexibility, while being safer and more environmentally friendly than traditional oil- or solvent-borne coatings. If you need premium fingerjointed product, you need Claymark Centurion from Warren Trask.
